

Digital Brand Audit & Growth Strategy i-ESG

A Digital Presence & Content
Strategy Audit of i-ESG
ESG Risk & Data
Management Platform

Prepared by	Ayaan Alam
Channels Audited	LinkedIn, Website, SEO
Report Date	June 2026
Competitors	3 Benchmarked
Deliverable	18-Post Content Calendar

KEY FINDINGS AT A GLANCE

Engagement Rate vs LinkedIn Average
2.71% vs benchmark of **0.5–1.0%**

Posting Frequency Gap
1.73/mo vs benchmark of 12–20/month

Mobile Page Speed	34/100
Overall SEO Score	74/100
Unused Testimonials	30+
Competitors w/ Zero Content	3 of 3

Audit conducted on i-ESG’s public LinkedIn page, website (i-esg.io), and 3 benchmarked competitors.
Data collected manually, June 2026.

1 Executive Summary

This report audits i-ESG’s digital brand presence — LinkedIn, website, and SEO — and delivers a content strategy to close identified gaps. i-ESG is an AI-powered ESG risk and data management SaaS platform, incubated within POSCO International, serving 500+ clients across Korea, Singapore, and the Asia-Pacific region.

Central Finding: i-ESG’s brand foundations — LinkedIn profile, website structure, and SEO — are strong (8/8 completeness on both channels). The critical gap is **content activity**: posting frequency of 1.73 posts/month sits 85–90% below the 12–20 posts/month industry benchmark for active B2B SaaS pages.

Five Headline Statistics

Metric	i-ESG (Current)	Benchmark
Posting Frequency	1.73/month	12–20/month
Engagement Rate	2.71%	0.5–1.0%
Mobile Page Speed	34/100	80+/100
Overall SEO Score	74/100	80+/100
Competitors w/ Active Content	0 of 3	—

Why This Matters: ESG software is a rapidly expanding, regulation-driven category (CSRD, CSDDD, SEBI ESG mandates). Buyers increasingly evaluate vendors via LinkedIn activity and search visibility before requesting a demo. Foundational strength without activity means i-ESG is invisible at the exact moment buyers are evaluating options.

2 Methodology & Scope

2.1 Audit Scope

1. **LinkedIn Profile & Content Audit** — profile completeness (8-point checklist), posting frequency, content type mix, engagement rate, buyer-vs-company content focus
2. **Website & SEO Audit** — value proposition clarity, page speed (Google PageSpeed Insights), technical SEO health (SEO Site Checkup)
3. **Competitor Benchmarking** — 3 ESG SaaS startups of comparable scale, audited identically
4. **ICP & Content Strategy** — buyer persona definition sourced from i-ESG’s own published customer testimonials

2.2 Data Sources

Source	Used For
LinkedIn & competitor pages (manual review)	Posting frequency, engagement, profile audit, benchmarking (ESG Connect, ESG Explorer, iQGo)
i-esg.io website	Value proposition, ICP, testimonials, SEO content
Google PageSpeed / SEO Site Checkup	Page speed scores, technical SEO health
Google Search (site: & keyword queries)	Keyword gap analysis, indexed pages

2.3 About i-ESG

i-ESG is an AI/Big Data-enabled B2B SaaS platform offering six modules spanning ESG assessment, reporting, supply chain risk, and carbon tracking. Headquartered in Seoul, South Korea, with a Singapore subsidiary, the company is B-Corp certified, ISO 27001/9001 certified, and a UN Global Compact member. It claims up to 95% cost reduction versus manual ESG consulting and 6x faster ESG disclosure for its 500+ global clients.

3 LinkedIn Profile & Content Audit

3.1 Profile Completeness

All eight standard LinkedIn profile elements — company logo, banner image, tagline, about section, website link, industry, company size, and specialities — are present and filled.

LinkedIn Profile Completeness (8 elements checked)	Score
Logo, banner, tagline, about, website, industry, size, specialities	8/8

Table 1: LinkedIn Profile Completeness Audit

i-ESG’s LinkedIn profile foundation is fully complete. The gap is not setup — it is what happens *after* a visitor lands on the page.

3.2 Posting Frequency & Engagement

Twenty posts were analysed, spanning approximately 11.6 months (July 2025 to June 2026).

Metric	Value	Benchmark
Posts analysed (11.6 months)	20	—
Posting frequency	1.73/month	12–20/month
Avg engagement rate per post	2.71%	0.5–1.0%
Avg likes per post	9.75	—
Total comments (20 posts)	2	2–5 per post

Table 2: LinkedIn Posting Frequency and Engagement, Jul 2025–Jun 2026

The Frequency-Quality Paradox: i-ESG’s engagement rate (2.71%) is 2.7–5.4x *above* LinkedIn’s average benchmark. The content that does get published performs well. The problem is volume, not quality — a far easier and lower-risk problem to fix.

3.3 Content Type & Focus Analysis

Content Type	Count	% of Total	Avg Engagement
Article/blog share	8	40%	14.50
Product promotion/demo	6	30%	8.67
Job posting	5	25%	6.20
Award win	1	5%	18.00

Table 3: Content Type Breakdown and Performance

Content Focus	Count	% of Total	Avg Engagement
Company-focused	12	60%	9.25
Buyer-focused	8	40%	13.25

Table 4: Content Focus: Company vs Buyer-Oriented

Buyer-focused content outperforms company-focused content by **43%** in average engagement, yet represents only **40%** of total posts. i-ESG is over-investing in the lower-performing content category.

4 Website & SEO Audit

4.1 Website Structure & Page Speed

The website has a clear value proposition headline, states who it serves and what problem it solves, has a CTA above the fold, is mobile responsive, hosts a blog with 30+ case studies and testimonials, and includes a pricing page — all structural elements are present.

Metric	Mobile	Desktop
PageSpeed Performance Score	34/100	59/100

Table 5: Google PageSpeed Insights Results

A mobile performance score of 34/100 is in Google’s “Poor” range. Most B2B buyers research vendors on mobile before booking a demo — slow load times risk losing leads before they see the value proposition. This is the single highest-priority technical fix in this audit.

4.2 SEO Technical Health

Title tag, sitemap, SSL, and mobile-friendliness all passed; meta description needs improvement.

Metric	Result
Overall SEO Score	74/100

Table 6: SEO Site Checkup Results

5 Competitor Benchmarking

Three ESG SaaS startups of comparable scale were identified and audited using the identical methodology applied to i-ESG.

Metric	i-ESG	ESG Connect	ESG Explorer	iQGo
LinkedIn Followers	400	1,819	392	2,375
Posts/month (original)	1.73	0	0	0
SEO Score	74/100	Unreachable	67/100	Unreachable
Mobile Speed Score	34/100	79/100	94/100	60/100

Table 7: Competitor Benchmark Comparison, June 2026

Two of three competitor websites (ESG Connect by Greenly, iQGo) returned “site cannot be reached” errors during this audit. Combined with zero original LinkedIn content across all three competitors, this materially changes the competitive narrative.

Reframing the Competitive Position: i-ESG is not behind its peer set — it is the *only* company actively creating original content and maintaining a fully functional website. Its sole genuine weakness relative to peers is mobile page speed (34/100), the worst of all four companies measured.

6 SEO Keyword Gap Analysis

Keyword	i-ESG Ranks?	Top Showing Competitors
ESG disclosure software	No	Workiva, SAP, Gartner, DFIN
Supplier ESG risk management software	No	Riskconnect, EcoVadis, IntegrityNext
Scope 1/2/3 emissions tracking software	No	Pulsora, Persefoni, Tracera, CO2 AI
ESG platform Korea/Asia mid-size enterprise	Yes (PR-driv	None — i-ESG’s own press coverage

Table 8: SEO Keyword Gap Analysis

Strategic Implication: i-ESG cannot compete head-to-head against Workiva, EcoVadis, or SAP on broad commercial keywords. The recommended path is long-tail positioning around its actual differentiators: *ESG software for Korean manufacturers, AI-powered ESG platform Asia, CSDDD compliance for SMEs* — lower-competition terms matching i-ESG’s real ICP rather than oversaturated enterprise categories.

7 Ideal Customer Profile (ICP)

The ICP below was constructed entirely from i-ESG’s own published customer testimonials and website content — not assumed or generalised.

Dimension	Finding
Industry	Manufacturing, Steel, Energy, Automotive, Electronics, Chemical, Financial Services, Construction, Real Estate, IT Services
Company Size	Mid-to-large enterprise (500+ employees) — testimonials reference 1,000+ supplier networks and board-level dashboards
Geography	Korea/APAC (primary), expanding to Singapore, SE Asia
Primary Buyer	ESG Manager / Sustainability Management Team
Secondary Buyer	CFO / Head of Finance / Finance & Strategy Director

Table 9: ICP Summary — i-ESG

7.1 Pain Points (Sourced from Testimonials)

1. ESG disclosure process taking up to 6 months — too slow for regulatory deadlines
2. Manual ESG data collection across 1,000+ suppliers is unmanageable at scale
3. Lack of in-house ESG expertise to handle compliance confidently
4. Fragmented ESG data across departments — no single source of truth
5. Subjective, inconsistent supplier ESG scoring criteria
6. Slow turnaround on ESG sections of client RFPs

The Content Goldmine: i-ESG’s website hosts 30+ specific, named customer testimonials and six ready-made use-case PDFs — yet the LinkedIn content audit found zero posts directly repurposing these assets. Converting existing testimonials into a LinkedIn content series requires no new research, only reformatting content i-ESG already owns.

8 Content Strategy: Three Campaign Themes

Theme	Purpose	Frequency	% of Calendar
Testimonial Takeover	Social proof using existing client testimonials	2x/week	40%
Regulation Decoder	Buyer education on CS- DDD, CSRD, ISSB	2x/week	40%
AI Behind the Curtain	Thought leadership & AI differentiation	1x/week	20%

Table 10: Three Campaign Themes — 6-Week Content Plan

This mix increases posting frequency from 1.73 to approximately 13 posts/month (3x/week), directly addressing the largest gap identified in this audit. The 6-week calendar comprises 18 scheduled posts, of which 5 were written as complete, publish-ready captions to demonstrate execution capability beyond strategic planning.

9 90-Day Metrics Projection

Metric	Baseline	Month 1	Month 2	Month 3
Posts per month	1.73	8	11	13
Avg impressions/post	220	231	253	280
Engagement rate/post	2.71%	2.85%	3.10%	3.39%
Follower growth/month	5	8	13	18

Table 11: 90-Day Month-by-Month Projection

Because baseline frequency (1.73/month) is far below benchmark, raw volume increase alone exceeds 800%. To avoid an inflated, non-credible headline figure, this report separates **volume** (a factual, near-certain operational change: 1.73 → 13 posts/month) from **per-post quality** (a benchmarked, conservative projection: **27%** increase in average impressions per post, driven by carousel format adoption and ICP-targeted content, per LinkedIn/Hootsuite 2024 benchmarks).

Recommended reporting language: “Projected 27% increase in per-post organic reach quality within 90 days, alongside a 7x increase in posting volume, based on LinkedIn content-format and algorithm benchmarks.”

10 Strategic Recommendations

10.1 Priority 1 — Immediate (0–30 Days)

1. **Fix Mobile Page Speed**

Cost: Medium

Mobile performance score of 34/100 is the single highest-priority technical fix. Likely causes: unoptimised images, lack of caching, render-blocking scripts. Target: 65+/100 within 90 days.

2. **Launch Testimonial Content Series**

Cost: Low

Repurpose the 30+ existing customer testimonials into LinkedIn carousel posts. Zero new research required — content already exists and is currently unused on the primary social channel.

3. **Increase Posting Frequency to 3x/Week**

Cost: Low–Medium

Move from 1.73 to approximately 13 posts/month using the 18-post, 6-week calendar built in this audit. Requires dedicated content ownership (estimated 3–5 hours/week).

10.2 Priority 2 — Medium-Term (30–90 Days)

1. **Shift Content Mix Toward Buyer-Focused Topics**

Cost: Low

Increase buyer-focused content from 40% to 70–80%, given its **43%** engagement advantage over company-focused content observed in this audit.

2. **Add Comment-Inviting CTAs**

Cost: Low

Only 2 comments were recorded across 20 posts. Introduce explicit questions, polls, and “comment below” prompts to convert passive likes into active engagement.

3. **Target Long-Tail SEO Keywords**

Cost: Medium

Shift SEO strategy away from saturated enterprise terms toward i-ESG’s genuine differentiators: Korean/APAC manufacturing focus, mid-size enterprise fit, AI-driven benchmarking.

10.3 Priority 3 — Ongoing

1. **Monthly KPI Tracking** — Establish a recurring monthly review of posting frequency, engagement rate, page speed, and SEO score against the targets in this report.

2. **Quarterly Competitor Re-Audit** — Given that 2 of 3 benchmarked competitors had non-functional websites at audit time, re-check competitive positioning quarterly.

11 Limitations & Conclusion

Limitations: LinkedIn data was collected manually, not via the official Analytics API (admin access required); figures are believed accurate but not independently verified. True peer-scale ESG SaaS competitors are scarce — 2 of 3 selected had notably higher follower counts, and 2 of 3 had non-functional websites at audit time. Ubersuggest returned no usable data for i-ESG's domain; findings rely on SEO Site Checkup and direct Google search testing instead.

Conclusion: i-ESG's foundational brand assets — a complete LinkedIn profile, a well-structured website, decent technical SEO, and genuinely strong engagement when content is published — are not the problem. **The problem is activity, not capability.** At 1.73 posts/month, i-ESG publishes roughly one-seventh the volume of an actively managed B2B SaaS page, despite strong product credibility (500+ clients, 13 AI patents, B-Corp certification) and untapped content assets (30+ testimonials). In a peer set where two of three competitors no longer maintain functional websites, i-ESG has an open opportunity to establish clear category leadership simply by executing consistently.

Treat content as a resourcing problem, not a strategy problem. The plan is fully specified here — three themes, an 18-post calendar, a testimonial series. What remains: 3–5 hrs/week to reach 13 posts/month in one quarter.

12 Appendix: Raw Data Summary

Metric	Value	Source
LinkedIn Followers	400	LinkedIn (June 2026)
Posts Analysed	20	Manual review, Jul 2025–Jun 2026
Total Likes / Comments (20 posts)	195 / 2	Manual count
Mobile / Desktop Page-Speed Score	34 / 59	Google PageSpeed Insights
SEO Site Checkup Score	74/100	seositecheckup.com
Pages Indexed (Google)	9+	site:i-esg.io search
